Poverty Income Guidelines (April 1981) 15

INTRODUCTION

The following report was prepared by the Employment Security Research Section of the Employment Security Department in cooperation with the State Comprehensive Employment and Training Office. These tables should be useful in formulating annual plans of various governmental agencies for the fiscal year 1983.

This information has been compiled for Nevada and three specific geographical areas: Las Vegas SMSA, Reno SMSA, and the Balance-of-State (BOS).

Data presented in this report are aggregated in such a way to meet the general needs of all users. If more detailed information is necessary to comply with specific requirements, please contact the Research Section.

ECONOMIC OVERVIEW
FY 1983

Data available through March, 1982 does not show any signs of the forecasted turnaround in the national economy. Large budget deficits are highly probable over the next few years; and the current economic malaise, indicated by depressed automobile and housing activity, is highlighted by a March unemployment rate of 9 percent. The last time the rate matched this level was in May of 1975.

Some improvement in business activity is expected to occur during the upcoming June-December period. In part, this is predicated on a lower rate of inflation than that which prevailed in the prior two years. Currently, the rate is around 4 to 4.5 percent. Unused factory capacity will also help contain future inflationary pressures. The second stage of the personal income tax cut will occur at mid-year and it is expected that this will stimulate consumer spending. Some curtailment of economic growth may occur, however, should expectations of lower rates of interest not materialize as expected.

Economic performance in Nevada has been affected by the deteriorating national economy. The influence of high interest rates not only curtailed construction and other industrial employment activity, but further softening was evident due to weaknesses that developed in the tourist industry. Tourist volumes have been subdued for the last year or so as reflected by slow growth in real or inflation adjusted gaming revenues. Annual revenue gains in 1980 and 1981 have only been a little better than 9 percent, while inflation has soared at 13.5 percent and 10.3 percent respectively.

In fiscal year 1982, the state rate of unemployment is expected to reach 7.6 percent. This time period encompasses the brunt of the current recession and subsequently job growth suffers. Only modest gains will be evident in the trade and service sectors. The other major industrial categories are expected to show mixed patterns, but they will mainly approximate their year ago job levels.

Employment growth in FY 83 will show a great deal of improvement, with job opportunities expected to expand by almost 19,000. This renewed business expansion will force the state's unemployment rate lower to 7.3 percent of the labor force. Assuming gains have been made in bringing interest rates down, construction activity should show significant improvement in both the residential and commercial sectors. Moderate improvements are also foreseen in the trade and service sectors, particularly in service jobs as defense spending at the southern Nevada test site becomes evident, and concurrently increased southern California related defense activity induces tourism gains. Job growth should also be evident in manufacturing and the other industrial sectors. Expectations for the mining industry appear dim at this time, given the softening in mineral prices. A variety of national and international factors will determine this industry's future.

In terms of the state's major metropolitan areas, FY 82 growth will emanate from the same source as indicated for the state - trade and service activity. In

the following fiscal year, the Las Vegas area will realize greater growth than other areas in the State due largely to the stimulus of defense spending and increased construction activity, including hotel expansions. Joblessness in the area will decline, with the unemployment rate expected to fall from 8.6 percent to 8.2 percent. The number jobs will very likely grow by better than 11,000.

In the northern portion of the State, the Reno economy will likely lack a great deal of resiliency. Improvements in the job picture will materialize, but the economy's rebound will lack the vigor exhibited in Las Vegas. Some restraints will be evident due to continued water and sewer limitations. On the positive side, some fairly substantial housing and resort developments may begin construction during the year. As in FY 82, most of the Reno's economic strength will develop in the hotel and gaming sectors. Between 4,000 and 5,000 new jobs will be generated from total business activity during the twelve month period. The unemployment rate will decline over the forecast period from 5.9 percent to 5.7 percent.

The uncertainty of mining activity will curtail the rapid growth undergone in the Balance of State (BOS) area during the last year or two. Employment gains will occur but at a rate below the areas long-term experience. Government job growth will be slow, and anticipated power plant construction in the Lander/Humboldt County area is still in limbo. A renewed start-up, however, is still a possibility in FY 82 and FY 83. The White Pine Power project is still in the early planning stages with actual construction scheduled for 1985. Some trade and service job gains will be evident. Approximately 3,000 additional jobs are expected due to the overall business expansion; and at the same time, fewer jobless persons will be in the labor force. The unemployment rate is expected to decline from 7.0 percent to 6.7 percent.
